SAMPLE WORKSHOP | 30 MINUTES

When AI can produce the answer

Participant worksheet

Choose one question or a 5 to 10 minute activity. Redesign it so learners can use AI at a defined stage and you can check their own understanding.

Your teaching context

Learners, subject and where the activity fits

The original task

Paste or summarise the instructions you use now

The learning goal

After the activity, what should learners be able to explain or do?

The thinking to practise

Which reasoning or subject knowledge needs practice?

AI's role

At which stage may AI help, and what will the learner do with its contribution?

Write the instructions and the check

The revised learner instructions

Include the first attempt, any AI assistance and what the learner will submit or explain

A short understanding check

Use a new example or changed condition. State the permitted resources and response format.

What you will look for

One sign of understanding and one possible gap to investigate

Feedback and revision

If that gap appears, what will you ask the learner to do next?

Your change after paired review

What did you revise, and why?

A small teaching trial

I will try this with… on… and examine…

Check that the goal, practice and understanding check require the same reasoning. Allow normal access arrangements.
